Pin Assignment

Connector type: M24308/24-39F or eq.

Pin No.	Description
4, 5, 17	PHASE A
7, 8, 20	PHASE B
10, 11, 23	PHASE C
15	+ SENSE †
2	- SENSE †
14	INHIBIT
1	SIGNAL RTN
25	CHASSIS

† Please inform factory if sense lines are required to be tied to the output from within, or if the remote sense compensation function will be used.

Functions and Signals

INHIBIT

The **INHIBIT** signal is used to turn the power supply ON and OFF.

OPEN – will turn on the power supply.

SHORT – between pin 14 and pin 1 will turn off the power supply.

This signal is referenced to the **SIGNAL RTN** pin.

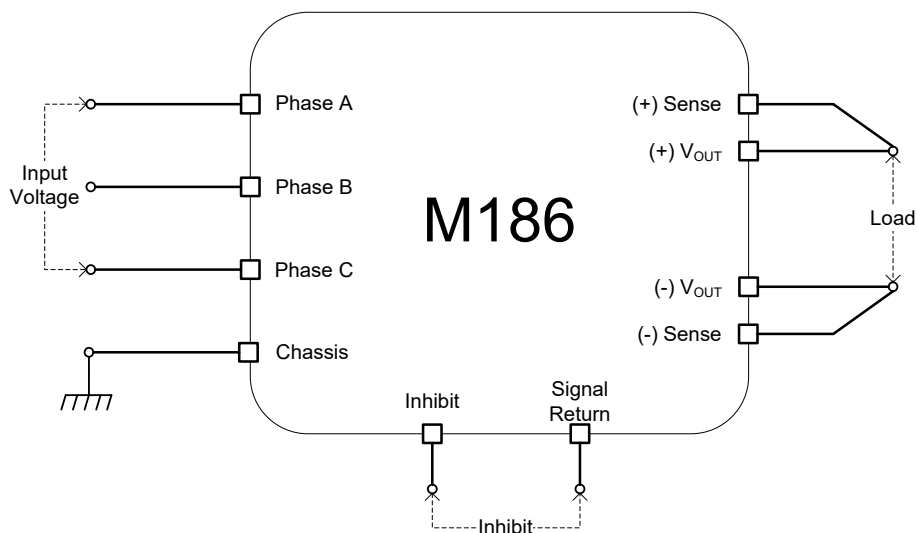

SENSE

The SENSE is used to achieve accurate load regulations at load terminals (this is done by connecting the pins directly to the load's terminals).

The use of remote sense has a limit of voltage dropout between converter's output and load terminals of 2-10% of voltage output (up to 2V).

Please note that if Sense lines are not used the output may rise as much as 2V above nominal outputs.
